BMI (kg/m ²)	25

TEST REPORT

**LOW****4%**

probability of cancer

PromarkerEso is a non-invasive, multi-biomarker blood test intended for the detection of esophageal adenocarcinoma (EAC). The PromarkerEso test score provides the probability of having EAC from 0-100%.

Test Results	Predictive Probability
Low	< 20%
Moderate	20% to 75%
High	> 75%

COMMENTS

PromarkerEso test results are to be read in conjunction with the PromarkerEso Interpretation Guide.

DISCLAIMER: Proteomics International provides lab test reports based on the information provided by you to us on the request form. Inaccurate, incomplete, or outdated clinical data may affect the test results leading to incorrect clinical interpretation and assessment. Healthcare providers are responsible for ensuring that all relevant patient history, clinical findings, and current health conditions are accurately reported when submitting a test request. The tests (described in this form) facilitated by Proteomics International do not replace currently recommended methods of disease detection or screening. The tests are NOT intended to diagnose, treat, or cure disease or condition, and gives no warranty that any clinical lab test will prevent disease or condition. The interpretation of any test and clinical management of the relevant patient's condition is the responsibility of the treating health/medical practitioner. Proteomics International does not engage in rendering medical advice or any other medical services.
